

Sustainability Policy Statement

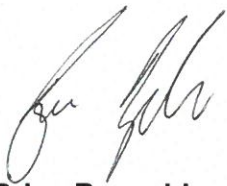

As the Chief Executive Officer of TXM Plant, I have a personal aspiration to ensure that our company activities respect the natural resources of our Planet. I see sustainability as a core value, ensuring the wise use of resources in which economic, environmental and social factors are balanced and implemented. We are fully committed to the prevention of pollution and minimising the impact that we have on our Planet's resources, not just for now, but for our future generations too.

We have a dedicated work force that will endeavour to raise the awareness of how we as a company can become efficient in managing natural resources.

Our employees, suppliers, and customers are fundamental to the success of this Policy, and together we shall meet and surpass the requirements of Environmental Legislation Targets at Global, National, Regional, and Local levels.

We have implemented ISO 14001:2015, ISO 9001:2015, and BS ISO 45001:2018 and have been awarded certification in all three disciplines. We are committed to following the guidance laid down in the standards to ensure we maintain our certification in the future.

Sustainability considerations shall be given when procuring services and materials from our approved supply chain, and life cycle impacts will be taken into account when disposing of our waste. We shall maximise the efficient use of energy and materials and shall promote reuse and recycling; and through the minimisation of waste generation we will increase the use of renewable resources.

Brian Reynolds
Chief Executive Officer
